Introduction

LA-SWM7-DCS2528-C is a new-generation intelligent gigabit access switch designed for carrier's IP MAN and enterprise networks. Based on the new-generation high-performance hardware and BDROS platform, supports functions such as ACL, QinQ and QoS. Its simple management mode and flexible installation can meet the requirement of any complicated scenarios.

Carrier-Level Ethernet Access Switch

- The carrier-level Ethernet-ring protection protocol with less than 50ms recovery time, STP/RSTP/MSTP, backup uplink ports, and LACP link aggregation to cater to the requirements of high reliability of carriers;
- Has powerful ACL functions to access and control L2-L7 data based on physical port, providing carriers flexible and various policy control methods;
- In-Service Software Series supports In-Service Software forwarding during system upgrade;
- Various L2 multicast functions such as IGMP-snooping, fast-leave and MVR to fully meet the operation requirements of carrier's IPTV.

Comprehensive IPv6 Solutions

- The IPv6 protocol suite, IPv6 neighbor discovery, ICMPv6 and Path MTU discovery.
- Ping, Traceroute, Telnet, SSH and ACL on the basis of IPv6, meeting IPv6 networks' equipment management requirements and service control requirements;

Enhanced QoS

- Priority retagging and complicated flow classification based on VLAN, MAC, source address, destination address, IP or priority, better streamlining carrier's services.
- Flexible bandwidth control policies, supporting port-/flow-based flow limit ensuring the line speed forwarding of each port.
- Multiple queue schedule algorithms such as SP, WRR and "SP + WRR".

Security+

- Equipment-level security: The advanced hardware infrastructure design realizes the level-based packet schedule and packet protection, prevents DoS-/TCP-related SYN Flood, UDP Flood, Broadcast Storm or large traffic attacks, and supports level-based command line protection, endowing different levels of users with different management permissions.
- Perfect security authentication mechanisms: IEEE 802.1x, Radius and BDTacacs+.
- Storm/multicast/unicast limit, ensuring the normal running of equipment in harsh network conditions.
- Perfect ring detection mechanism, ensuring the long-term stable running of network.
- Port isolation within the same VLAN, DHCP-Snooping, and IP + MAC + Port binding.

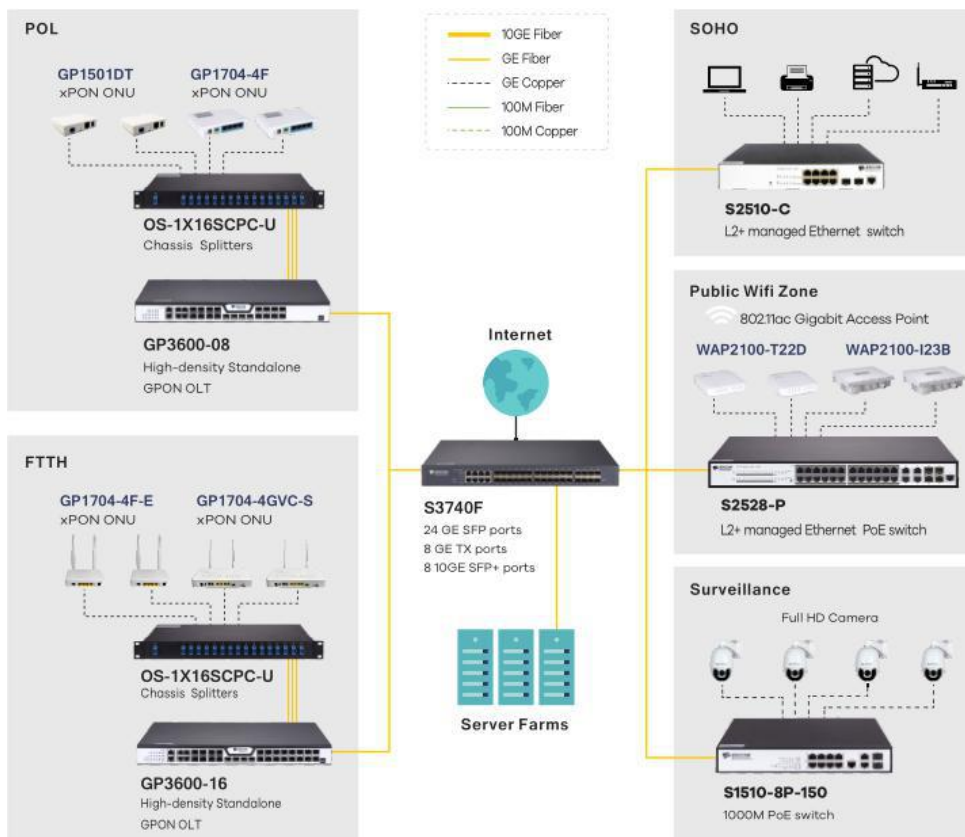

Easy Management and Maintenance

- Many management modes such as the CLI, Telnet, SSH, SSL and SNMP.
- The WEB management mode, which is easy and efficient for installing and debugging the device.
- Supports FTP, TFTP and SFTP.
- ISSU (In-Service Software Upgrade).
- SNMP and BDCOM NMS smart network management platform. The combination realizes automatic equipment discovery, network topology management, equipment configuration management, performance data statistics and analysis and trouble management.
- Zero Touch Provisioning (ZTP) function to minimize manual operator intervention and helps reduce customers' initial deployment costs.
